为何需要虚拟化?

Scenario 1

 -> Different Network Functions running on Host Machine

-> Vulnerable Solution – No isolation one Network function and effect other.

Scenario 4

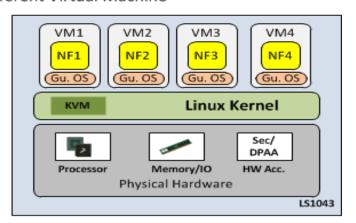

- -> Pushed Network Functions to PE
- -> VM Migration

-> Dynamic Service Chaining

Scenario 2

 -> Different Network Functions running inside different Virtual Machine

-> Network Function isolation and Protection

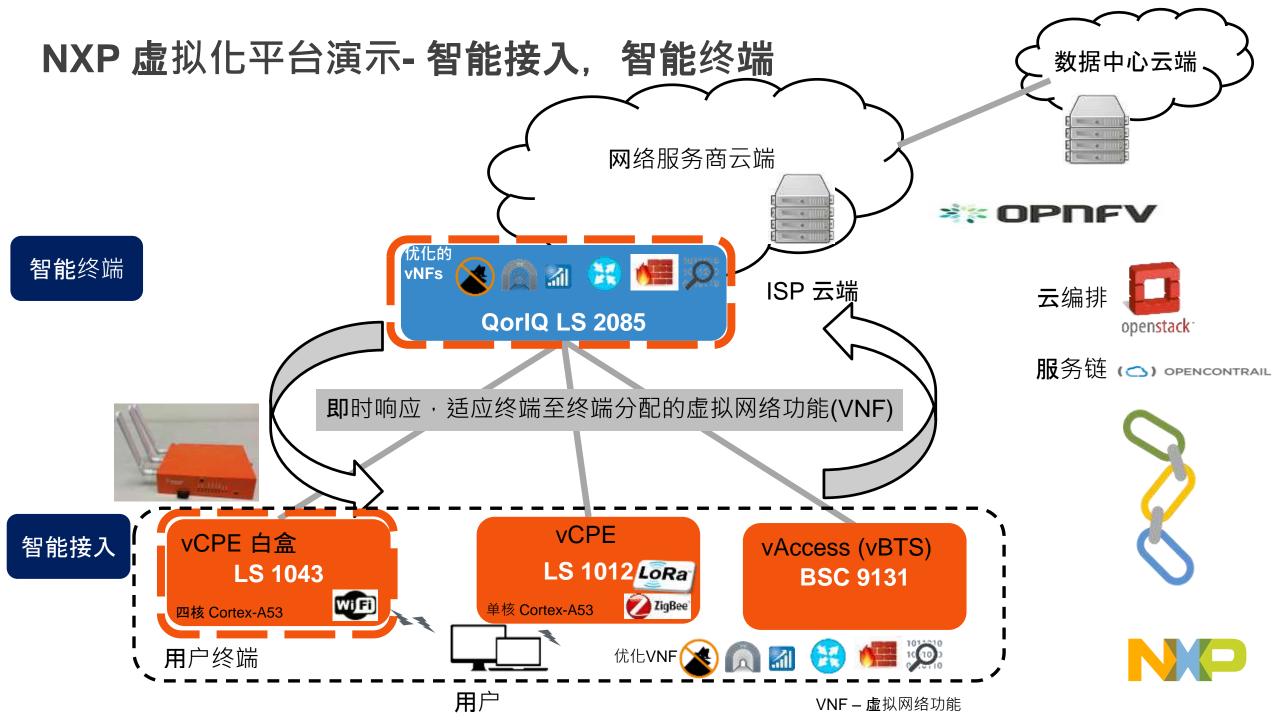

- -> Not Enough Memory to run bigger instance of Network functions on CPE
- -> Make Snapshots of applications

-> On Demand distribution of VNF's to PE equipment and vice versa
